

Exercise 1: Create a Cursor

```
DECLARE emp_cursor CURSOR FOR  
SELECT EmployeeID, FirstName, LastName, Salary  
FROM Employees;
```

```
OPEN emp_cursor;
```

```
FETCH NEXT FROM emp_cursor;
```

```
WHILE @@FETCH_STATUS=0  
BEGIN  
PRINT 'Employee Details Displayed';  
FETCH NEXT FROM emp_cursor;  
END
```

```
CLOSE emp_cursor;
```

```
DEALLOCATE emp_cursor;
```

EmployeeID	FirstName	LastName	Salary
1	John	Doe	5000.00
2	Jane	Smith	6000.00
3	Bob	Johnson	5500.00

Exercise 2: Types of Cursors

```
DECLARE static_cursor CURSOR STATIC  
FOR SELECT * FROM Employees;
```

```
DECLARE dynamic_cursor CURSOR DYNAMIC  
FOR SELECT * FROM Employees;
```

```
DECLARE forward_cursor CURSOR FORWARD_ONLY  
FOR SELECT * FROM Employees;
```

```
DECLARE keyset_cursor CURSOR KEYSET  
FOR SELECT * FROM Employees;
```

Cursor Type	Behavior
STATIC	Fixed result set
DYNAMIC	Shows changes
FORWARD_ONLY	Moves only forward
KEYSET	Tracks key values
